PROFILE

I like finding where AI can make someone's work genuinely easier, and checking it can be trusted before it spreads. At Exergenics, an energy startup in Melbourne, I interviewed engineers and sales staff to map how work moves between them, and the fixes I recommended were put into practice. In my own projects I build working AI tools and then test them hard. In one, testing showed a confidence label was right only 69% of the time, and fixing it raised that to 88%. Growing up in Chennai and studying in Melbourne has taught me how differently teams work across countries. At Sysmex, I want to help teams try AI ideas quickly, scale the ones that work, and keep them safe as they grow.

SKILLS

AI and Automation: Generative AI, prompt engineering, Gemini API, AI prototyping, machine learning, testing and validating AI outputs, process automation

Business Transformation: User interviews, process mapping, SOPs, requirements gathering, process improvement, business cases, rollout planning

IT Governance and Privacy: GDPR and SOX compliance, COBIT, ITIL, NIST Cybersecurity Framework, consent and access controls, audit trails

Data and Development: Python (pandas, scikit-learn, LightGBM), SQL, JavaScript, Streamlit, Power BI, Excel, Git

Professional: Cross cultural collaboration, stakeholder communication, presentations and pitching

EDUCATION

Master of Information Systems, University of Melbourne 2025 to 2026
Weighted Average Mark 77.25 | Engineering and IT Graduate Scholarship, 2025

B.Tech, Computer Science, SRM Institute of Science and Technology, Chennai 2021 to 2025
CGPA 9.40 / 10

EXPERIENCE

Optimisation Engineer Intern, Exergenics 2026
Energy optimisation startup, Melbourne

- Interviewed engineers and sales staff to document the team's handover and delivery workflows as SOPs.
- Found gaps in these processes and recommended fixes to the Head of Engineering, which were implemented.
- Analyse chiller and HVAC data in Python to support building optimisation and digital twin models.

Software Developer Intern, IIT Madras 2025 to 2026
Clinical research, Chennai

- Gathered requirements from clinical researchers on how they collect and use implant data.
- Built clinical data interfaces in C++, Qt and SQL, validated against five clinical benchmarks.
- Mapped end to end data flows and flagged schema inconsistencies across experimental datasets.

Cybersecurity Intern, Globus Medical 2024 to 2025
US medical device company, Chennai office

- Monitored vulnerabilities and endpoints across internal systems using Rapid7 and CrowdStrike.
- Tracked GDPR and SOX compliance items from identification through to remediation and closure.
- Prepared monthly risk reports and Power BI dashboards that turned findings into clear actions.

Software Developer Intern, Appasamy Associates 2023 to 2024
Ophthalmic medical devices, Chennai

- Studied how clinicians used OCT scan workflows on ophthalmic diagnostic devices.
- Redesigned the Qt interface around their feedback to make the device software easier to use.
- Simplified the data retrieval process with SQL, cutting retrieval steps by 25%.

PROJECTS

Genetic Testing Decision Support, with Privacy by Design 2026
Extended from Digital Transformation of eHealth coursework

- Built a GP tool that recommends a genetic test from symptoms, using 577 conditions from HPO data.
- Added consent checks, pseudonymisation, role based access and an audit trail to protect patient data.
- Testing found an overconfident label; recalibrating it raised its accuracy from 69% to 88%.

Churn Prediction: From Employees to Bank Customers 2026
Extended from Business Analytics coursework

- Compared five models on employee attrition data, from clustering and logistic regression to a neural network.
- Applied the same approach to 1.06 million real bank transactions, flagging savings outflows 3 months early.
- Shipped both as live, no code tools that show the risk, the reasons behind it and a suggested action.

Lumen: Smart Precinct Pitch, FEIT Hackathon 2026 2026
Team project, University of Melbourne

- Led the stakeholder research to define the precinct's problem before proposing a solution.
- Proposed privacy first pedestrian counting with computer vision, crowd forecasting and a digital twin.
- Built the business case and led the final pitch; placed Top 5 of 15 and won the SMEC Spot Prize.

WanderWise: AI Travel Assistant 2024
Personal project

- Built a working prototype pairing a Gemini AI assistant with a hybrid recommender and live weather data.
- Designed an offline fallback so the app keeps working when the AI is unavailable.

ACHIEVEMENTS

Published Paper, IJERT 2024: “Enhancing Attendance Management Systems Using Facial Recognition” (project lead).

FEIT Hackathon 2026: Top 5 of 15 finalist teams and winner of the SMEC Spot Prize.

Melbourne Plus Global Career Competencies Program: Placed first; awarded a study trip to Atoule, Bangkok.

Melbourne Plus Award: Earned all five badges for leadership and engagement beyond the classroom.

LEADERSHIP

Member, Global Strategy Reference Group (2026): Shared student views on the University's global ties across five workshops; pitched APAC Careers Bridge.

FEIT Representative, People and Equity Delegates (2026): Represent FEIT students on equity and inclusion matters with the Pro Vice Chancellor's team.

Financial Officer, Strive Student Health Initiative: Manage budgets and financial reporting; automated expense tracking, cutting manual data entry by 40%.

Unimart Leader, University of Melbourne Student Union (UMSU): Lead student volunteers running Unimart on campus.

Cohort Member, GSA LEAD Program 2026: Built skills in leading teams and guiding people through change.

MENTORING

Python Coding Mentor, Girl Power Network: Run hands on Python sessions that build coding confidence from scratch.

FEIT Peer Mentor: Help new postgraduate students settle into FEIT and university life.

FEIT Girl Power Program Mentor: Guide Year 11 girls on breaking into STEM careers.
